

## How To Clean Out Your Clogged Sanding Sticks

I have the problem of clogging my sanding sticks with putty when working on my models.

For a while I found that pulling them through a cotton rag would clean out most of the putty. However it would still leave the worst behind. I now have over 20 sanding sticks to replace ones that had filled in.

I now use a wire wheel from my drill (the wire brush I have is far to large). I just scrape it down the stick and it pulls out all of the putty even the hardened areas.

So now I can use all 20 of my sanding sticks again.
